

## **Adding New Equipment? Then a survey is strongly recommended.**

A network survey is recommended when implementing, or updating, a wireless network. When deploying a wireless network, Antibus looks for the optimal wireless coverage and performance. A survey will reveal places of signal interferences, places where signals are weaker and dead zones.

### **Antibus supports you with:**

- Site Survey
- Wi-Fi equipment
- Network installation

### **Diagnostics:**

Issues can come up with your Wi-Fi network, but that doesn't have to stop your company's operations. Antibus can assist with a diagnostic and provide you with a resolution.

**Contact Antibus today for more information**
