

General-Purpose Weighing for Tanks, Hoppers, OEM Machinery

Tank Weighing

Available in capacities up to 75,000 lb, VLM3 weigh modules are suitable for weighing heavy-capacity tanks and hoppers.

Load Cells

VLM3 weigh modules are available with load cells made of nickel-plated alloy steel (Model SLD425) or stainless steel (Model SLD525). Both can be used for indoor or outdoor applications. They feature a dual-ended-beam design with potted seals that provide IP67 protection.

Sliding Suspension

The weigh module suspension allows the load cell to slide laterally on the pins that secure it to the lower mounting plate. This design compensates for thermal expansion and contraction of vessels due to ambient temperature change or internal vessel reactions.

Self-Checking Design

VLM3 weigh modules have mounting hardware with a self-checking design and anti-uplift protection. No external checking is needed.

VLM3 Weigh Module

VLM3 weigh modules offer good value for general-purpose weighing of tanks, hoppers, and OEM machinery. They use dual-ended-beam load cells to deliver accurate and repeatable weighing. The self-checking design is suitable for static loading in applications where thermal expansion and contraction occurs. Mounting hardware is available in carbon steel or stainless steel to stand up to a variety of environments.

- Capacity range: 1K - 75K (0.4 - 34t)
- Carbon steel or stainless steel construction
- Self checking for economical system integration
- Uplift protection
- Compensation for thermal expansion/contraction
- Factory Mutual approved load cells

¹ Maximum vertical downward force that can be applied to the top plate.

² Error due to the combined effect of non-linearity and hysteresis.

³ Typical values only. The sum of errors due to combined error and temperature effect on sensitivity comply with the requirements of OIML R60 and NIST HB44.

⁴ A.L. = Applied Load.

⁵ See certificate for complete information.

⁶ Maximum horizontal force that can be applied to the top plate in a direction transverse to the longitudinal axis of the load cell (in the absence of vertical load).

⁷ Maximum horizontal force that can be applied to the top plate in a direction parallel to the longitudinal axis of the load cell (in the absence of vertical load).

⁸ Maximum vertical uplift force that can be applied to the top plate.

Note: All maximum force values are derived by limiting stresses to 60% of yield stress in all weigh module components (verified by FEA analysis).

Weigh-Connect-Control-Comply

METTLER TOLEDO embeds intelligence into weighing applications. Our industry leading scale electronics enable users to integrate their gravimetric measurement with applications running on PCs, PLCs, or DCS systems. Our products are designed specifically for industries subject to regulatory controls, such as pharmaceutical, chemical, food and beverage, and have been confirmed by multiple global agency standards including UL, CE, NTEP, and OIML.
